Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Cory S, Adams J, Print C, Gibson L, Koentgen

N-PSDB; AAX25133. WPI; 1999-243890/20.

An animal model exhibiting reduced levels protein associated with Bcl-w. of a Bcl-w protein and/or

Claim 2; Page 35; 52pp; English.

sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene (see AAX25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise The present sequence is mouse Bcl-w, a pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic

The present sequence represents rat bcl-y protein (Rbcl-y). The specification also describes human bcl-y protein (Rbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein thought to be involved in programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y proteins may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, Alzhelmer's Disease, neural and muscular degenerative diseases (especially multiple sclerosis), myocardial infarction, vitally induced cell death, aging, spinal cord injuries and amyotrophic lateral sclerosis conditions where cells under go premature cell death as a result of triggers which may or may not be apparent. They may also be used in this way to develop cell lines which remain viable in culture for an extended

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rat bol-y protein; Rbol-y; human bol-y protein; Hbol-y; bol-2 homologue; programmed cell death; apoptosis; necrosis; cell death inhibitor; stroke; head trauma, Alzheimer's Disease; neural; muscular degenerative disease; multiple sclerosis; myocardial infarction; vitally induced cell death; agging; spinal cord injury; amyotrophic lateral sclerosis; cancer; premature cell death; cell death stimulator; prolonged cell life span; Kaposi's sarcoma; lung cancer; autoimmune; hyperimmune disease; parasite.
The specification describes rat bcl-y protein (Rbcl-y) and human bcl-y protein (Hbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein thought to be involved in programmed cell death (apoptosis and necrosis) Rbcl-y and Hbcl-y proteins may be used to treat conditions associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 193 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            period. In contrast, if they act as cell death stimulators, Rbcl-y and Hbcl-y may be used to treat conditions associated with prolonged cell life span such as cancer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune diseases. They may also be used to cause cell death
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-FEB-1996;

If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, Alzheimer's Disease, neural and muscular degenerative diseases (especially multiple sclerosis), myocardial infarction, vitally induced cell death, aging, spinal cord injuries and amyotrophic lateral sclerosis- conditions where cells under go premature cell death as a result of triggers which may or may not be apparent. They may also be used in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, Rbcl-y and Hbcl-y may be used to treat conditions associated with prolonged cell life span such as cancer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune diseases. They may also be used to cause cell death in, and hence control, parasites

The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Nethods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene (see AAX25122-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which can induce infertility

The invention discloses a composition comprising two or more isolated rat cor human polymucleotides or a polymucleotide which represents a fragment, contributive or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the mucleic acid sequence contributive or allelic variation of the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a cit to perform the method, an array, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal compound that is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the polymucleotide sequence which is differentially compound that regulates the activity of one or more of the specification, a method for identifying a compound which regulates the activity in an animal of one or more of the polymucleotides, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of polympetides or their antibodies. The polymucleotide or the compound that regulates the activity in an animal of one or more of the polympetides or their antibodies. The polympetides or the compound that polympetides or their antibodies. The polympetide or the compound that injury (CCI) and spared nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (Chung), chronic constriction the sequence data for this patent did not form part of the printed conspective twoshes, introbubrinhished soft semimeres.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; Page; 1017pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The mammalian bcl-y protein is a member of the bcl-2 family, componed in the cell death pathway. The bcl-2 family have both apoptotic act and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo.
                                                                                                                                                                                                                                                         Rat bcl-y protein; Rbcl-y; human bcl-y protein; Hbcl-y; bcl-2 homologue; programmed cell death; apoptosis; necrosis; cell death inhibitor; stroke head trauma; Alzheimer's Disease; neural; muscular degenerative disease; multiple sclerosis; myocardia infarction; vitally induced cell death; aging; spinal cord injury; amyotrophic lateral sclerosis; cancer; premature cell death; cell death stimulator; prolonged cell life span;

The present sequence represents human bcl-y protein (Hbcl-y). The CC specification also describes rat bcl-y protein (Rbcl-y). Rbcl-y and Hbcl-CY are homologues of the bcl-2 protein thought to be involved in CC proteins may be used to treat conditions associated with a disruption of CC the cell death pathway. If they act as cell death inhibitors, they may be CC used in therapies to treat subjects suffering from: strokes, head trauma, CC Alzheimer's Disease, neural and muscular degenerative diseases CC (especially multiple sclerosis), myocardial infarction, vitally induced cell death, aging, spinal cord injuries and amyotrophic lateral sclerosis CC -conditions where cells under go premature cell death as a result of CC conditions where cells under go premature cell death as a result of CC way to develop cell lines which remain viable in culture for an extended CC period. In contrast, if they act as cell death stimulators, Rbcl-y and CC the span such as cancer (especially kaposi's sarcoma and lung cancer) CC and auto/hyperimmune diseases. They may also be used to cause cell death CC in, and hence control, parasites

This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bol-w for therapy, diagnosis, antibody production or screening of potential modulators
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid encoding apoptosis related gene bcl-w - used to induce inhibit cell survival, e.g. for treatment of cancer and degenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cory S,

The invention CC relates generally to a method of treatment and to an animal model for the CC reducing fertility of male animals. Methods are provided for the CC reducing fertility, or for reducing fertility, by modulating CC spermatogenesis. An animal model carries a mutation is at least one CC allele of the human or murine bcl-w gene (see AAX25132-35) or in a gene CC associated with bcl-w. Such animals have disorganised seminferous tubules CC and are substantially infertile, but possess no other major abnormalities CC as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, CC enhancing or otherwise facilitating spermatogenesis in animals, or which

                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                 CC The present sequence represents a mammalian bcy-l protein. The CC specification describes rat bcl-y protein (Rbcl-y) and human bcl-y protein (Hbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein CC protein (Hbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein CC thought to be involved in programmed cell death (apoptosis and necrosis). CC Rbcl-y and Hbcl-y proteins may be used to treat conditions associated cc with a disruption of the cell death pathway. If they act as cell death CC inhibitors, they may be used in therapies to treat subjects suffering CC from: strokes, head trauma, Alzheimer's Disease, neural and muscular CC degenerative diseases (especially multiple sclerosis), myocardial cc infarction, vitally induced cell death, aging, spinal cord injuries and amyotrophic lateral sclerosis- conditions where cells under go premature cell death as a result of triggers which may or may not be apparent. They may also be used in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, Rbcl-y and Hbcl-y may be used to treat conditions associated with prolonged cell life span such as cancer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune diseases. They may also be used to cause cell death in, and hence control, parasites
                                                                                                                                                                                                                                                                                                                                     Query Match

Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene (see AAX25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is described of a derivative of mouse Bcl-w (see also AAY05531), a pro-survival member of the Bcl-2 family that is widd expressed and which is essential for spermatogenesis. The derivative lacks the 24 N-terminal amino acids of Bcl-w. The invention relates generally to a method of treatment and to an animal model for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 192
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Spermatogenesis; Bcl-3; Bcl-2; mouse; fertility; infertility; animal model.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       enhancing or otherwise facilitating spermatogenesis in animals, or which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a novel protein, bcl-w, encoded by the mouse bcl-2 gene family. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential modulators
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 168 AA

                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of the human Bcl-Rambo apoptotic transcription factor, particularly the BHNo domain. The sequences are useful in the treatment of diseases caused by incorrectly regulated intracellular signal transduction, including cancers, neurodegenerative diseases (e.g. Alzheimer's or Parkinson's diseases), muscular dystrophy, viral infections (including human immunodeficiency virus), autoimmune disease, septic shock, graft versus host disease and acute hepatitis. The present sequence is a protein described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           nootropic; neuroprotective; antiparkinsonian; virucide; antiinf

                                                                                                                                                                                                                                                        This is the amino acid sequence of the cDNA clone Bcl-like (HAICH29), used in the method of the invention. The products of the clone can be used for treating conditions associated with abnormal expression of the polypeptides. They can be used for e.g. treating chronic inflammatory diseases, immunological disorders, autoimmune diseases, inflammatory diseases, various allergies, and as anti-infectious agents. The products can also be used for detection and diagnosis
                                                                                                                                                                                                                                   Sequence 365 AA;
                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotides and encoded polypeptides - used to develop products for treating e.g. inflammatory diseases, infections, immunological disorders, autoimmune diseases, allergies or tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 1998-414099/35.
